

# *Accounting and Reporting for Inventory: The Basics*

## Chapter 8

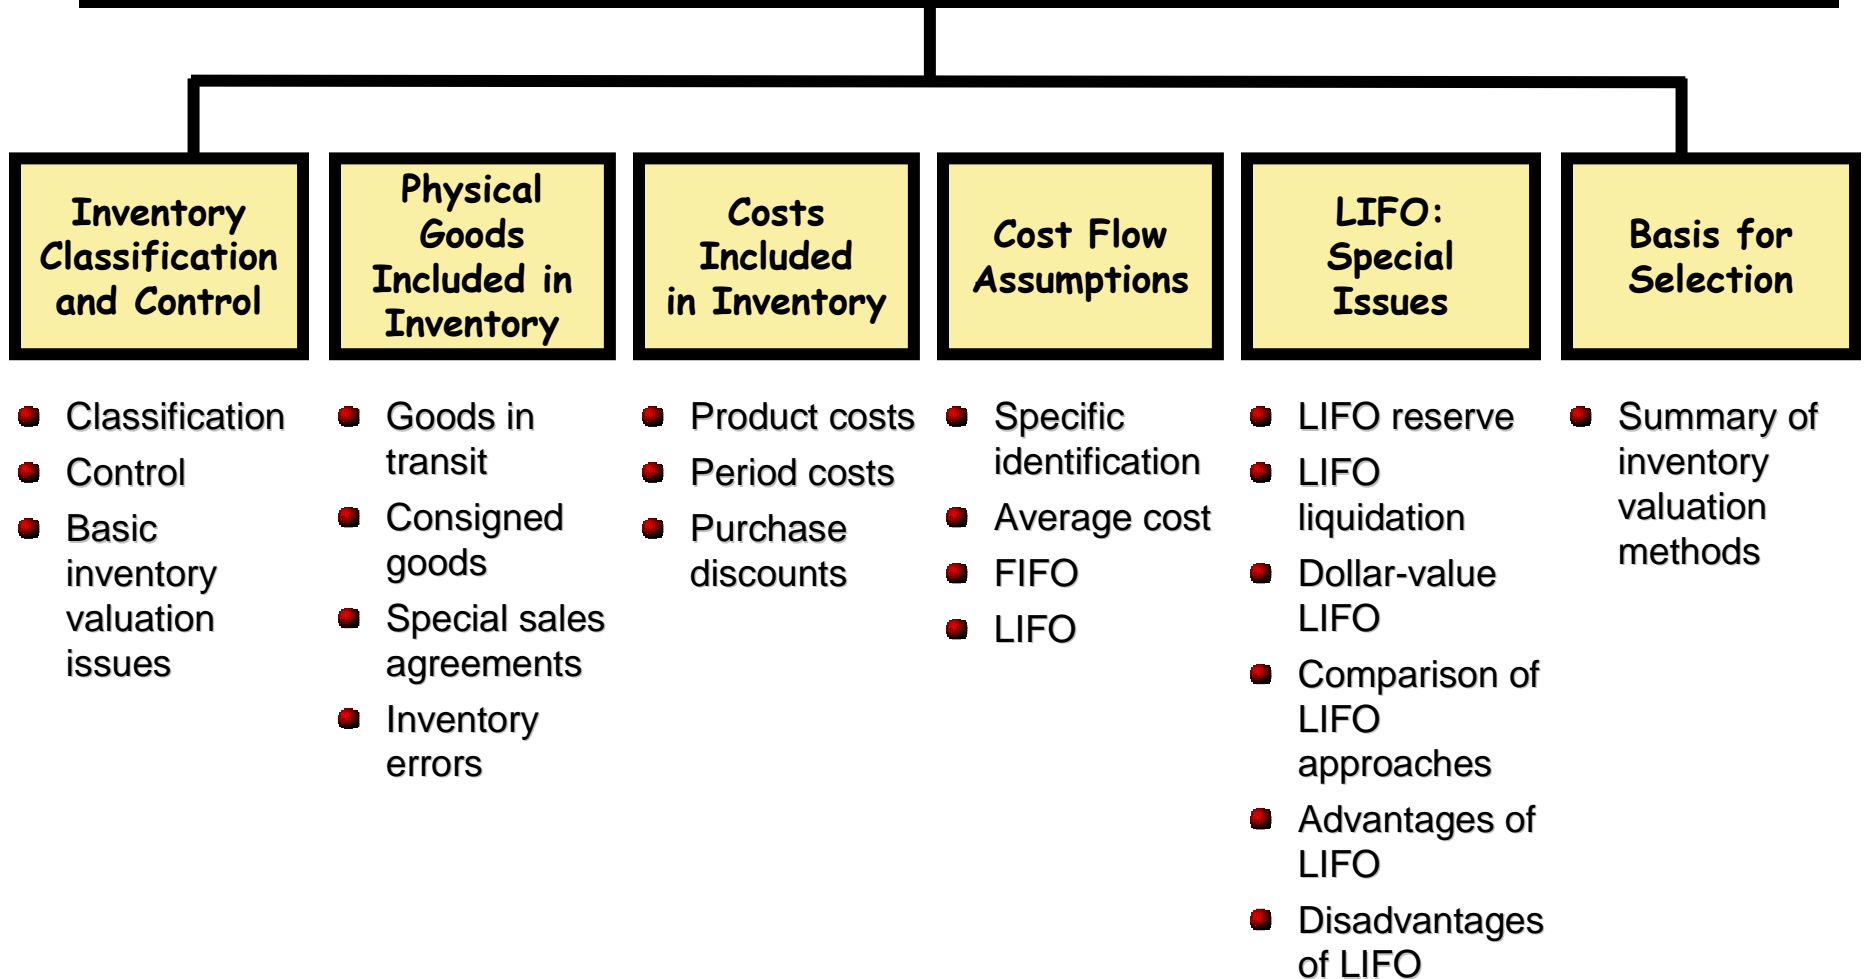

Intermediate Accounting  
12th Edition  
Kieso, Weygandt, and Warfield

## *Learning Objectives*

1. Identify major classifications of inventory.
2. Distinguish between perpetual and periodic inventory systems.
3. Identify the effects of inventory errors on the financial statements.
4. Understand the items to include as inventory cost.
5. Describe and compare the cost flow assumptions used to account for inventories.
6. Explain the significance and use of a LIFO reserve.
7. Understand the effect of LIFO liquidations.
8. Explain the dollar-value LIFO method.
9. Identify the major advantages and disadvantages of LIFO.
10. Understand why companies select given inventory methods.

# ***Valuation of Inventories: Cost-basis Approach***

# ***Inventory Classification and Systems***

## **Classification**

Inventories are:

- items held for sale, or
- goods to be used in the production of goods to be sold.

## **Businesses with Inventory:**

**Merchandiser**

or

**Manufacturer**

# *Inventory Classification and Systems*

## Type of Business

### **Merchandiser**

- One inventory account
- Purchase goods ready for sale

#### Balance Sheet (in thousands)

##### Current assets

Cash	\$ 285,000
Marketable securities	530,000
Accounts receivable	149,000
Merchandise inventory	777,000
Prepays	33,000
Total current assets	<u>1,774,000</u>

##### Investments:

Investment in ABC bonds	321,657
Investment in UC Inc.	253,980
Notes receivable	150,000
Land held for speculation	550,000
Sinking fund	225,000
Pension fund	653,798

# *Inventory Classification and Systems*

## Type of Business

### Manufacturer

Three accounts

- Raw materials
- Work in process
- Finished goods

#### Balance Sheet (in thousands)

##### Current assets

Cash	\$285,000
Marketable securities	530,000
Accounts receivable	149,000

##### Inventory

Raw materials	210,000
Work in process	417,000
Finished goods	150,000
Total inventory	<u>777,000</u>

Prepays	33,000
---------	--------

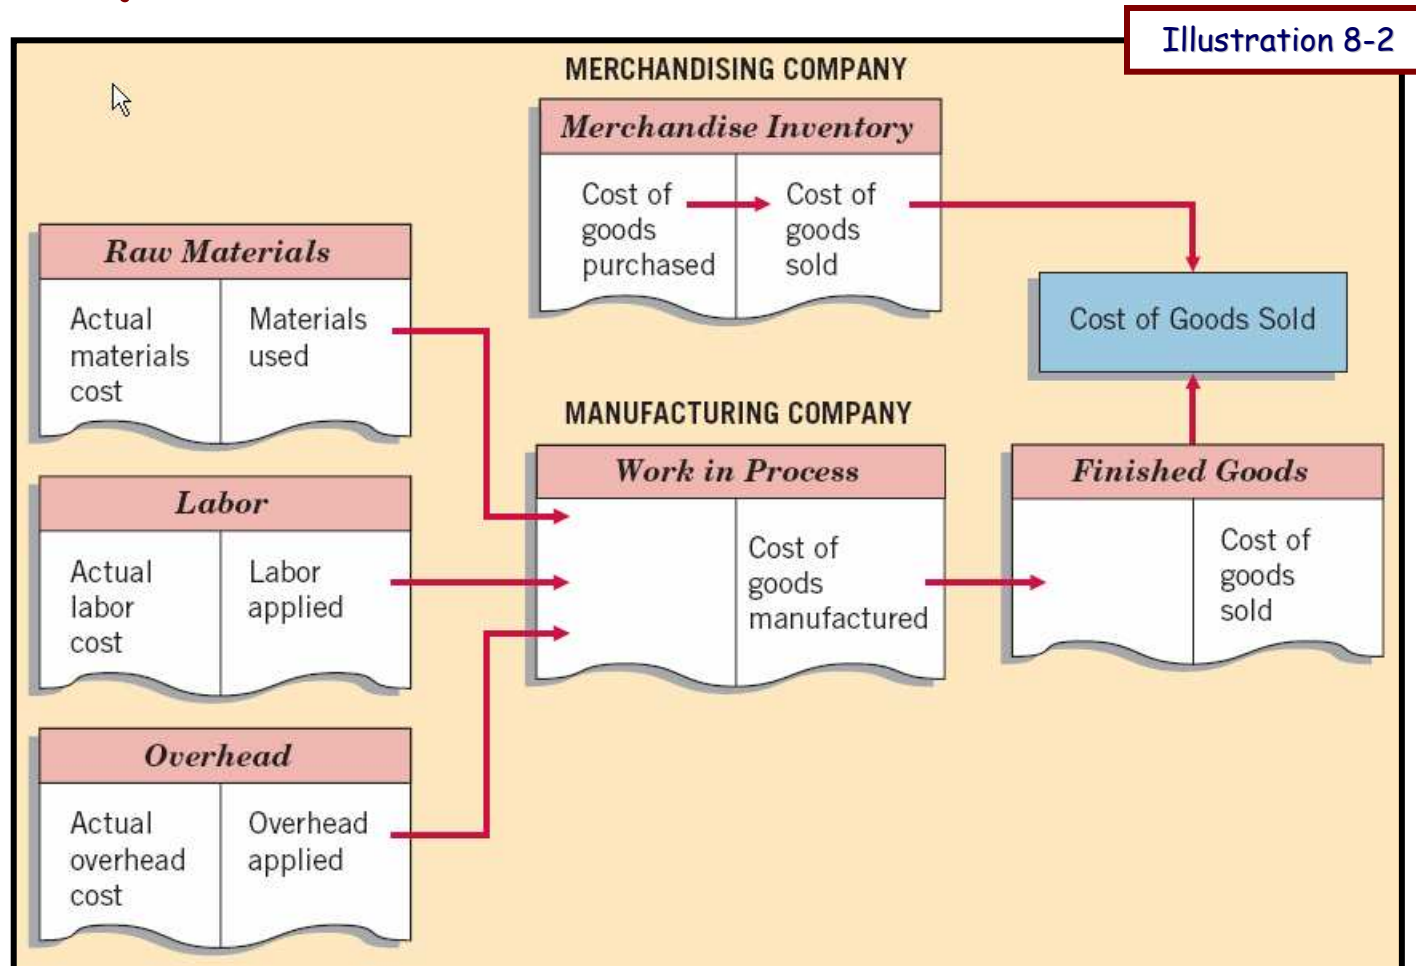

Total current assets	<u>1,774,000</u>
----------------------	------------------

##### Investments:

Investment in ABC bonds	321,657
-------------------------	---------

# Inventory Classification and Systems

## Flow of Costs

# *Inventory Classification and Systems*

## **Control**

Two systems for maintaining inventory records:

- Perpetual system
- Periodic system

# *Inventory Classification and Systems*

## **Perpetual System**

Features:

1. Purchases of merchandise are debited to Inventory.
2. Freight-in, purchase returns and allowances, and purchase discounts are recorded in Inventory.
3. Cost of goods sold is debited and Inventory is credited for each sale.
4. Physical count done to verify Inventory balance.

The perpetual inventory system provides a continuous record of Inventory and Cost of Goods Sold.

# *Inventory Classification and Systems*

## **Periodic System**

Features:

1. Purchases of merchandise are debited to Purchases.
2. Ending Inventory determined by physical count.
3. Calculation of Cost of Goods Sold:

Beginning inventory	\$ 100,000
Purchases, net	800,000
	<hr/>
Goods available for sale	900,000
Ending inventory	125,000
	<hr/>
Cost of goods sold	<u><u>\$ 775,000</u></u>

# ***Inventory Classification and Systems***

## **Perpetual System**

**vs.**

## **Periodic System**

1. Beginning inventory (100 units at \$7 = 700)

2. Purchase 900 units at \$7:

<b>Inventory</b>	<b>6,300</b>	
<b>Accounts payable</b>		<b>6,300</b>

<b>Purchases</b>	<b>6,300</b>	
<b>Accounts payable</b>		<b>6,300</b>

3. Sale of 600 units at \$14:

<b>Accounts receivable</b>	<b>8,400</b>	
<b>Sales</b>		<b>8,400</b>
<b>Cost of goods sold</b>	<b>4,200</b>	
<b>Inventory</b>		<b>4,200</b>

<b>Accounts receivable</b>	<b>8,400</b>	
<b>Sales</b>		<b>8,400</b>

4. Adjusting entries (ending inventory = 400 units @ \$7 = \$2,800)

**No Entry Necessary**

<b>Inventory</b>	<b>2,100</b>	
<b>Cost of goods sold</b>		<b>4,200</b>
<b>Purchases</b>		<b>6,300</b>

# ***Basic Issues in Inventory Valuation***

## **Valuation of Inventories**

Requires the following:

- The **physical goods** (goods on hand, goods in transit, consigned goods, special sales agreements).
- The **costs to include** (product vs. period costs).
- The **cost flow assumption** (FIFO, LIFO, Average cost, Specific Identification, Retail, etc.).

# *Physical Goods Included in Inventory*

## Physical Goods

A company should record purchases when it obtains legal title to the goods.

### Special Consideration:

- Goods in Transit (FOB shipping point, FOB destination)
- Consigned goods
- Sales with buyback agreement
- Sales with high rates of return
- Sales on installment
- Inventory errors

# Effect of Inventory Errors

## Ending Inventory Understated

Balance Sheet		Income Statement	
Inventory	Understated	Cost of goods sold	Overstated
Retained earnings	Understated		
Working capital (current assets less current liabilities)	Understated	Net income	Understated
Current ratio (current assets divided by current liabilities)	Understated		

Illustration 8-6

The effect of an error on net income in one year (2006) will be counterbalanced in the next (2007), however the income statement will be misstated for both years.

# Effect of Inventory Errors

## Purchases and Inventory Understated

Balance Sheet		Income Statement	
Inventory	Understated	Purchases	Understated
Retained earnings	No effect	Cost of goods sold	No effect
Accounts payable	Understated	Net income	No effect
Working capital	No effect	Inventory (ending)	Understated
Current ratio	Overstated		

Illustration 8-8

The understatement does not affect cost of goods sold and net income because the errors offset one another.

## ***Costs Included in Inventory***

- **Product Costs** - costs directly connected with bringing the goods to the buyer's place of business and converting such goods to a salable condition.
- **Period Costs** - generally selling, general, and administrative expenses.
- **Purchase Discounts** - Gross vs. Net Method

# ***Treatment of Purchase Discounts***

## **Gross Method**

**vs.**

## **Net Method**

Purchase cost \$20,000, terms 2/10, net 30:

<b>Purchases</b>	<b>20,000</b>	
<b>Accounts payable</b>		<b>20,000</b>

<b>Purchases</b>	<b>19,600</b>	
<b>Accounts payable</b>		<b>19,600</b>

Invoices of \$15,000 are paid within discount period:

<b>Accounts payable</b>	<b>15,000</b>	
<b>Purchase discounts</b>	<b>300</b>	
<b>Cash</b>		<b>14,700</b>

<b>Accounts payable</b>	<b>14,700</b>	
<b>Cash</b>		<b>14,700</b>

Invoices of \$5,000 are paid after discount period:

<b>Accounts payable</b>	<b>5,000</b>	
<b>Cash</b>		<b>5,000</b>

<b>Accounts payable</b>	<b>4,900</b>	
<b>Purchase discount lost</b>	<b>100</b>	
<b>Cash</b>		<b>5,000</b>

# *What Cost Flow Assumption to Adopt?*

**FIFO**

**LIFO**

Cost Flow Assumption Adopted  
does not need to equal  
Physical Movement of Goods

**Average Cost**

**Specific Identification**

**Answer:** Method adopted should be one that most clearly reflects periodic income.

# *Cost Flow Assumptions*

## Example

Young & Crazy Company makes the following purchases:

1. One item on 2/2/07 for \$10
2. One item on 2/15/07 for \$15
3. One item on 2/25/07 for \$20

Young & Crazy Company sells one item on 2/28/07 for \$90. What would be the balance of ending inventory and cost of goods sold for the month ended Feb. 2007, assuming the company used the **FIFO**, **LIFO**, **Average Cost**, and **Specific Identification** cost flow assumptions? Assume a tax rate of 30%.

# Cost Flow Assumptions

## "First-In-First-Out (FIFO)"

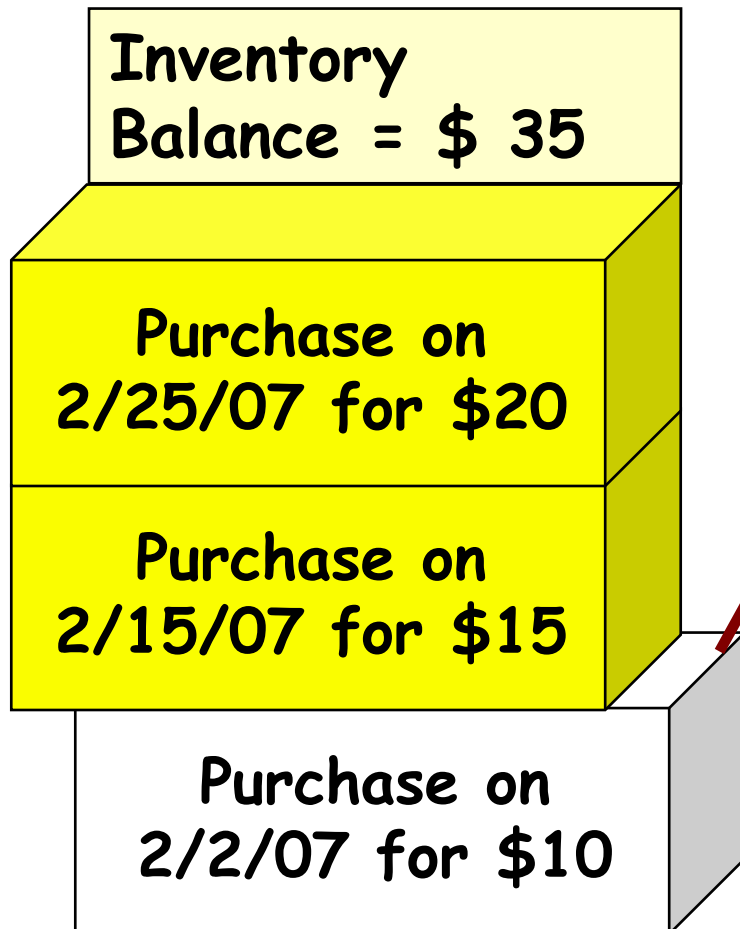

### Young & Crazy Company Income Statement For the Month of Feb. 2007

<b>Sales</b>	<b>\$ 90</b>
<b>Cost of goods sold</b>	<b><u>0</u></b>
Gross profit	<u>90</u>
Expenses:	
Administrative	14
Selling	12

<b>Income tax expense</b>	<b>14</b>	<b>11</b>	<b>12</b>
<b>Net income</b>	<b>\$ 33</b>	<b>\$ 26</b>	<b>\$ 30</b>
<b>Inventory Balance</b>	<b>35</b>	<b>25</b>	<b>30</b>

## Cost Flow Assumptions

### Example – Perpetual and Periodic Methods

Inventory information for Part 686 for the month of June.

June	1	Beg. Balance	300 units @ \$10 =	\$ 3,000	} Goods Available  <b>\$19,100</b>
	10	Sold	200 units @ \$24		
	11	Purchased	800 units @ \$12 =	9,600	
	15	Sold	500 units @ \$25		
	20	Purchased	500 units @ \$13 =	6,500	
	27	Sold	300 units @ \$27		

1. Assuming the **Perpetual** Inventory Method, compute the Cost of Goods Sold and Ending Inventory under FIFO, LIFO, and Average cost.
2. Assuming the **Periodic** Inventory Method, compute the Cost of Goods Sold and Ending Inventory under FIFO, LIFO, and Average cost.

# Cost Flow Assumptions

Perpetual  
Inventory

+

FIFO Method

FIFO:					
Transactions:		Inventory Balance:			
Date	Units	Layer 1	Layer 2	Layer 3	Total
Jun 1	300	300			
Jun 10	(200)	(200)			
Jun 11	800		800		
Jun 15	(500)	(100)	(400)		
Jun 20	500			500	
Jun 27	(300)		(300)		
		-	100	500	600
Cost		\$ 10	\$ 12	\$ 13	
	600	\$ -	\$ 1,200	\$ 6,500	\$ 7,700
Calculation of Cost of Goods Sold:				Units	Dollars
	Beg. inventory			300	\$ 3,000
	Purchases			1,300	16,100
	Goods available			1,600	19,100
	Ending inventory			(600)	(7,700)
	COGS			1,000	\$ 11,400

# Cost Flow Assumptions

Perpetual  
Inventory

+

LIFO Method

LIFO:					
Transactions:		Inventory Balance:			
Date	Units	Layer 1	Layer 2	Layer 3	Total

	Beg. inventory			300	\$ 3,000
	Purchases			1,300	16,100
	Goods available			1,600	19,100
	Ending inventory			(600)	(7,200)
	COGS			1,000	\$ 11,900

# Cost Flow Assumptions

**Perpetual Inventory**

+

**Moving Average**

Transactions:			
Date	Units	Cost	Total
Jun 1	300	\$ 10.00	\$ 3,000
Jun 10	(200)	10.00	(2,000)
Jun 11	800	12.00	9,600
Jun 15	(500)	11.78	(5,890)
Jun 20	500	13.00	6,500
Jun 27	(300)	12.46	(3,738)
	600		<b>\$ 7,472</b>
Cost of Goods Sold:			
	Beg. inventory		
	Purchases		
	Goods available		
	Ending inventory		
	COGS		

Running Balances		Average
Units	Cost	Cost
300	\$ 3,000	\$ 10.00
100	1,000	10.00
900	10,600	11.78
400	4,710	11.78
900	11,210	12.46
600	7,472	12.46
Units		Dollars
300	\$ 3,000	
1,300	16,100	
1,600	19,100	
(600)	(7,472)	
1,000	<b>\$ 11,628</b>	

Cost per unit sold is determined by dividing total inventory \$ by total units on hand after each purchase.

# Cost Flow Assumptions

Perpetual Inventory

+

Moving Average

Transactions:			
Date	Units	Cost	Total
Jun 1	300	\$ 10.00	\$ 3,000
Jun 10	(200)	10.00	(2,000)

Jun 20	500				
Jun 27	(300)				
		300	300	-	600
Cost		\$ 10	\$ 12	\$ 13	
	600	\$ 3,000	\$ 3,600	\$ -	\$ 6,600
Calculation of Cost of Goods Sold:		Units		Dollars	
	Beg. inventory		300	\$	3,000
	Purchases		1,300		16,100
	Goods available		1,600		19,100
	Ending inventory		(600)		(6,600)
	COGS		1,000	\$	12,500

# Cost Flow Assumptions

## Periodic Inventory

Transactions:			
Date	Units	Cost	Total
Jun 1	300	\$ 10.00	\$ 3,000
Jun 10			-
Jun 11	800	12.00	9,600
Jun 15			-
Jun 20	500	13.00	6,500
Jun 27			-
	1600		19,100
Divided by units available			1,600
Average cost per unit			11.94
Unit on hand			600
Ending inventory			\$ 7,163

+

## Weighted Average

Calculation of Cost of Goods Sold:		
	Units	Dollars
Beg. inventory	300	\$ 3,000
Purchases	1,300	16,100
Goods available	1,600	19,100
Ending inventory	(600)	(7,163)
COGS	1,000	\$ 11,938

# *Special Issues Related to LIFO*

## LIFO Reserve

Many companies use

- LIFO for tax and external financial reporting purposes
- FIFO, average cost, or standard cost system for internal reporting purposes.

Reasons:

1. Pricing decisions
2. Record keeping easier
3. Profit-sharing or bonus arrangements
4. LIFO troublesome for interim periods

## *Special Issues Related to LIFO*

**LIFO Reserve** is the difference between the inventory method used for internal reporting purposes and LIFO.

**Example:**

FIFO value per books	\$160,000
LIFO value	<u>145,000</u>
LIFO Reserve	<u><u>\$ 15,000</u></u>

**Journal entry** to reduce inventory to LIFO:

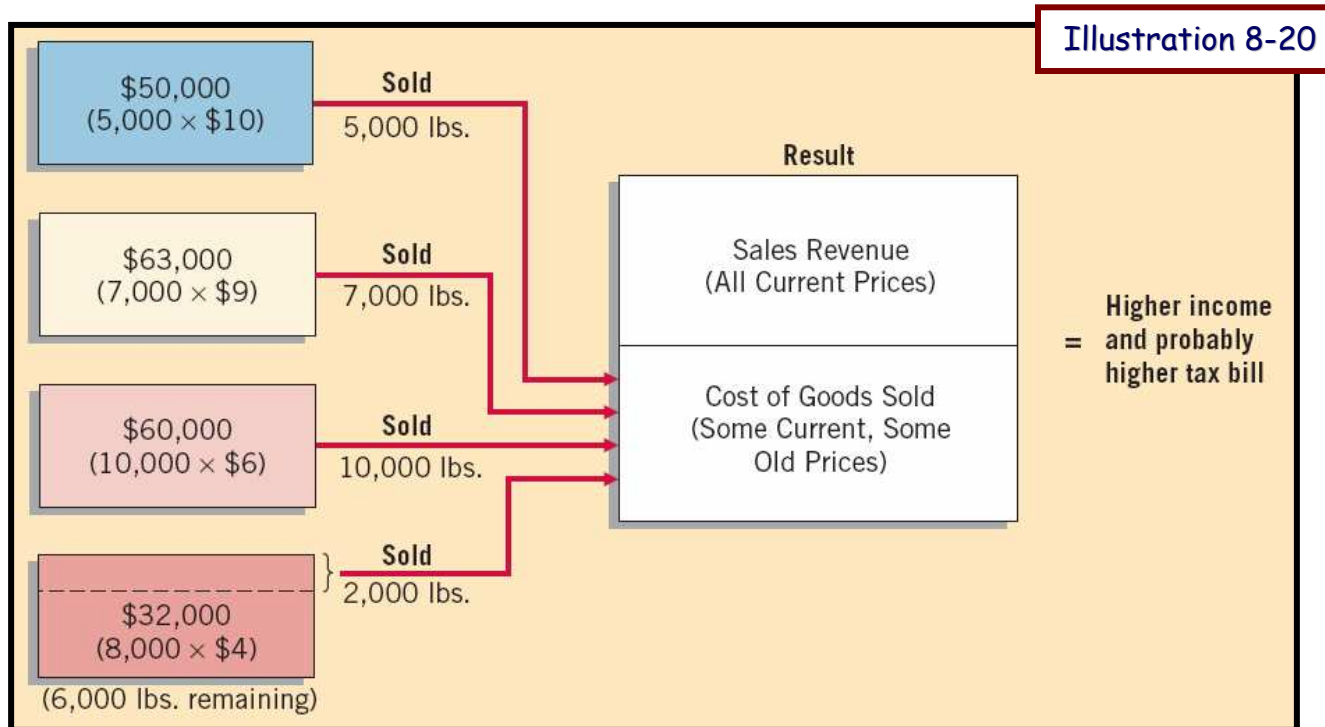

Cost of goods sold	15,000	
LIFO reserve		15,000

Companies should disclose either the LIFO reserve or the replacement cost of the inventory.

# Special Issues Related to LIFO

## LIFO Liquidation

Older, low cost inventory is sold resulting in a lower cost of goods sold, higher net income, and higher taxes.

## *Special Issues Related to LIFO*

### Dollar-Value LIFO

- Changes in a pool are measured in terms of total dollar value, not physical quantity.

#### Advantage:

- Broader range of goods in pool.
- Permits replacement of goods that are similar.
- Helps protect LIFO layers from erosion.

## *Special Issues Related to LIFO*

### Dollar-Value LIFO

**Exercise 8-26** The following information relates to the Jimmy Johnson Company.

<u>Date</u>	<u>Ending Inventory (End-of-Year Prices)</u>	<u>Price Index</u>
December 31, 2003	\$ 70,000	100
December 31, 2004	90,300	105
December 31, 2005	95,120	116

Use the dollar-value LIFO method to compute the ending inventory for 2003 through 2005.

# Special Issues Related to LIFO

## Exercise 8-26 Solution

Inventory at			Inventory at			\$ Value		
End-of-Year			Base-Year	Base		\$ Value	LIFO	LIFO
Year	Prices	Index	Prices	Layers	Index	LIFO	TOTAL	Reserve
2003	\$ 70,000	1.00	\$ 70,000	\$ 70,000	1.00	\$ 70,000	\$ 70,000	\$ -
2004	90,300	1.05	86,000	70,000	1.00	70,000	86,800	3,500
				16,000	1.05	16,800		
2005	95,120	1.16	82,000	70,000	1.00	70,000	82,600	12,520
				12,000	1.05	12,600		
<b>Balance Sheet</b>			Dec. 31	Dec. 31		Dec. 31		
			2003	2004		2005		
	Inventory		\$ 70,000	\$ 90,300		\$ 95,120		
	LIFO Reserve		-	(3,500)		(12,520)		
			\$ 70,000	\$ 86,800		\$ 82,600		
<b>Journal entry</b>								
	Cost of goods sold			3,500		9,020		
	Lifo reserve			(3,500)		(9,020)		

## *Special Issues Related to LIFO*

### Comparison of LIFO Approaches

- **Specific-goods LIFO** - costing goods on a unit basis is expensive and time consuming.
- **Specific-goods Pooled LIFO approach**
  - reduces record keeping and clerical costs.
  - more difficult to erode the layers.
  - using quantities as measurement basis can lead to untimely LIFO liquidations.
- **Dollar-value LIFO** is used by most companies.

## *Special Issues Related to LIFO*

### *Advantages*

- Matching
- Tax Benefits/Improved Cash Flow
- Future Earnings Hedge

### *Disadvantages*

- Reduced earnings
- Inventory understated
- Physical flow
- Involuntary Liquidation / Poor Buying Habits

## ***Basis for Selection of Inventory Method***

LIFO is generally preferred:

1. if selling prices are increasing faster than costs and
2. if a company has a fairly constant "base stock."

LIFO not appropriate:

1. if prices tend to lag behind costs,
2. if specific identification traditionally used, and
3. when unit costs tend to decrease as production increases.
